

Nguyen Trung Nghia

FULLSTACK DEVELOPER · DEVOPS ENTHUSIAST

Phuc Tho, Hanoi, Vietnam · 0353 295 709 · trungnghia180205@gmail.com · [LinkedIn](#) · [GitHub](#) · [Portfolio](#)

PROFESSIONAL SUMMARY

Information Technology student at UET, VNU Hanoi with hands-on experience in fullstack development, backend systems, and deployment workflows. Experienced in building and deploying real-world projects with Docker, CI/CD, Linux VPS, and modern backend technologies. Participating in VNU-SME Lab research activities and seeking opportunities as a Fullstack Developer with a long-term focus on DevOps engineering.

EDUCATION

University of Engineering and Technology (UET), Vietnam National University, Hanoi

Expected July 2027

Bachelor of Information Technology

GPA: 3.43 / 4.0

TECHNICAL SKILLS

Languages	PHP, Java, TypeScript, C++	Frontend	React, JavaFX
Backend	Laravel, Spring Boot, Node.js, Express.js	Databases	MySQL, PostgreSQL, SQLite
DevOps	Docker, Linux, GitHub Actions, CI/CD	Tools	Git, GitHub, SonarQube
Soft Skills	Leadership, Team Collaboration, Research, Problem-solving		

RESEARCH EXPERIENCE

VNU-SME Lab

2024 — Present

Research Member

- Participating in software engineering and research-oriented development activities.
- Exploring UML/OCL modeling, graph databases, and model-driven engineering concepts.
- Collaborating with lab members on system analysis and development-related tasks.

PROJECTS

LINE Smart Queue Assistant [↗ smartqueue.io.vn](#)

Apr 2026 – Present

Personal Project

TypeScript · React · Express.js · PostgreSQL · Docker · Docker Compose · CI Testing

A smart queue management system integrated with the LINE messaging platform, enabling users to register, track, and manage service queues digitally in real time.

- Designed and implemented RESTful backend APIs covering queue registration, service selection, real-time status tracking, and automated notification workflows.
- Modelled a normalized PostgreSQL schema for users, services, queue entries, and notification records, ensuring data integrity and efficient querying.
- Configured Docker Compose development environment and CI testing pipeline for consistent builds and quality assurance across environments.

Laravel · MySQL · Docker · Docker Compose · Linux VPS · Nginx/Apache · CI/CD · GitHub Actions

A full-featured e-commerce web application for a flower shop, supporting product cataloguing, online ordering, cart management, and store administration.

- Led a team of 3 to deliver a complete e-commerce platform — product management, shopping cart, order processing, and admin dashboard — within 3 months.
- Containerized the application with Docker Compose and automated deployments via GitHub Actions CI/CD pipeline to a Linux VPS.
- Configured production web server (Nginx/Apache), managed domain setup, and handled end-to-end server administration.

Kotlin · MySQL · Docker · Docker Compose · CI Testing · VPS · CameraX

An Android application leveraging real-time camera analysis to detect and respond to user emotions, delivering personalized and interactive experiences.

- Led a team of 4 in designing the application architecture and implementing camera-based emotion detection using Kotlin and CameraX.
- Managed backend and database integration with MySQL; established CI testing workflow and coordinated VPS-based deployment environment.

Java Core · JavaFX · JUnit · SQLite · Unit Testing

A desktop application for managing library resources — books, members, and borrowing records — built with a clean JavaFX interface and local SQLite storage.

- Developed core modules for book cataloguing, member management, and borrowing/return tracking using JavaFX and SQLite.
- Applied object-oriented design patterns and wrote JUnit unit tests to validate key business logic and ensure code reliability.
